

a The game

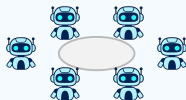

- 6 players, 10 rounds, 40 units each
- Pay 0, 2 or 4 each round
- Pool reaches 120: keep the rest
- Pool misses: lose all with probability p

b Four designs

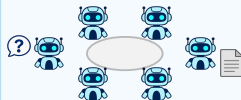

Claude Haiku 4.5
 Gemini 3.5 Flash-Lite
 GPT-5.6 Luna
 Qwen3-235B
 Grok 4.20

Self-play

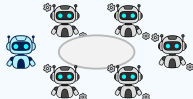

One model in all seats, 11 risk levels, 0 to 1

Prompt tests

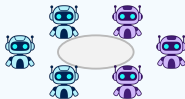

In-game questions, rewording, goal stated

Scripted partners

One model, five scripts: always 0, 2 or 4, or copy

Two models

10 pairs at one table, then selection

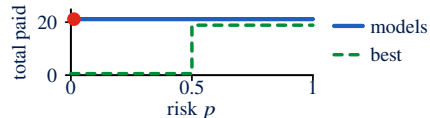

LLM agent

second model

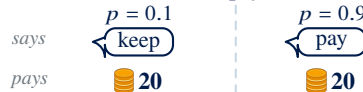

scripted partner

c What we find

1 Same payment at every risk, even at $p = 0$

2 Answers track the risk; payments do not

3 One late dropout breaks a fair-share table

4 The scoring rule decides who is selected
