

a The game

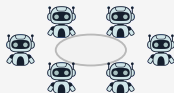

- 6 players, 10 rounds, 40 units each
- Pay 0, 2 or 4 each round
- Pool reaches 120: keep the rest
- Pool misses: lose all with probability p

b Four designs

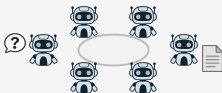

Claude
 Gemini 3.5
 GPT-5.6
 Qwen3-235B
 Haiku 4.5
 Flash-Lite
 Luna
 Grok 4.20

Self-play

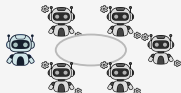

One model in all seats,
11 risk levels, 0 to 1

Prompt tests

In-game questions,
rewording, goal stated

Scripted partners

One model, five scripts:
always 0, 2 or 4, or copy

Two models

10 pairs at one table,
then selection

LLM agent

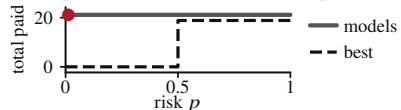

second model

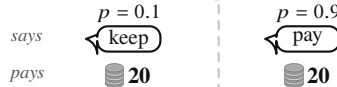

scripted partner

c What we find

- Same payment at every risk, even at $p = 0$

- Answers track the risk; payments do not

- One late dropout breaks a fair-share table

- The scoring rule decides who is selected
